Executive Summary

This report analyzes Egypt's international trade performance in sport products between 2019 and 2024. Drawing on detailed import and export data categorized by product and country, it highlights key trends, trade balances, and market opportunities.

Overview

During the initial years, Egypt experienced a trade deficit, with imports of sport products—particularly toys and sports equipment—significantly outpacing exports. However, a clear shift began in 2022. Exports of items such as sportswear and recreational boats grew rapidly, and by 2023 Egypt had achieved a trade surplus, which further strengthened in 2024. This change reflects an improvement in local manufacturing capacity and a growing international demand for Egyptian-made sport goods.

Key export partners include the US, Sudan, and Saudi Arabia, while China and Turkiye remain major sources of imports. Egypt's ability to reverse its trade imbalance and expand its presence in global sports product markets signals strong potential for further growth, particularly through targeted investment, policy support, and export development.

Methodology

This report is based on a quantitative analysis of Egypt's international trade in sports products over five years, from 2019 to 2024. The methodology involves extracting, cleaning, and analyzing structured trade data provided in Arabic-language spreadsheets. The data has been categorized into exports and imports, broken down by year, product category, and trading partner. Key metrics such as total trade values, trade balance, and product-specific performance were calculated and visualized to highlight trends and patterns over time.

Data overview

The dataset used in this report includes four main sheets:

- 1.Exports Dataset** : A record of Egypt's sport product exports by product category and destination country from 2019 to 2024. It includes annual values and total export sums.
- 2.Imports Dataset:** A matching record of sport product imports into Egypt, by product and origin country, across the same six-year span.
- 3.Product Category Summary:** A ranked summary of the top five import and export categories by total trade value.
- 4.Trade by Country:** A summary table of total imports and exports by country, allowing for partner-specific analysis.

To ensure accuracy, export and import figures were analyzed separately, then aggregated annually to identify Egypt's net trade position. Additional comparisons were made across top-performing product categories and partner countries. The analysis includes both summary statistics and visual aids, such as trend charts and tables, to support conclusions and recommendations.

The approach also involved translating key category names and data labels from Arabic to English for reporting purposes, while preserving the original numeric values and timeframes. Product classification was guided by descriptive labels in the dataset (e.g., "sportswear," "sports equipment," "toys"), which were grouped under the broader theme of sport products.

Trade Trends (2019–2024)

This section examines the evolution of Egypt's trade activity in sport products over the six-year period from 2019 to 2024. The analysis focuses on the total values of exports and imports, the resulting trade balance, and the annual growth.

1. Total exports and Imports 2019-2024

Overall, Egypt imported approximately

**1.3
billion \$**

and exported

**1.02
billion \$**

Despite the initially higher volume of imports, exports have shown a significant upward trajectory, especially from 2022 onward. This trend indicates strengthening domestic production and competitiveness in the international sports market.

From 2019 to 2021, Egypt consistently maintained a trade deficit, with the trade balance reaching its lowest point in 2019 and 2021, both reflecting deficits close to \$-160 million USD. The turning point came in 2022, where export growth began to close the gap. By 2023, exports exceeded imports for the first time in this dataset, resulting in a trade surplus. This surplus widened further in 2024, reinforcing the positive direction of Egypt's trade performance in this sector.

2. Growth rate 2019-2024

70.92%

is the trade growth rate, signaling strong year-over-year progress.

This reflects the country's ability to expand its export capacity and shift toward a more balanced or surplus trade model in sport-related goods.

Summary

Egypt's trade trajectory in the sport product sector is clearly moving in a favorable direction, characterized by reduced deficits, increased export activity, and signs of sustainable growth. Continued focus on export development could further solidify this trend and improve the country's global trade positioning in the coming years.

Country-Level Analysis

Understanding Egypt's trade performance by country offers valuable insight into its global partnerships and the dynamics of import and export flows in the sport product sector. The dataset and dashboard indicate a diverse range of trading partners, each playing a different role in Egypt's trade ecosystem.

Top Importers

Egypt's top sources of sport product imports are led by China, which dominates due to its global role in manufacturing toys, sports equipment, and related goods. Turkiye, Italy, US, and Jordan follow, supplying a mix of quality gear and recreational items.

This import pattern highlights Egypt's continued reliance on global supply chains, particularly from Asia and Europe. The concentration of imports from a few countries, especially China, suggests a strategic opportunity for Egypt to invest in local production and reduce its dependency over time.

#	Country	Market shares	Total Revenue
1.	China	67.84%	\$558 million
2.	Turkiye	14.09%	\$116 million
3.	Italy	6.67%	\$55 million
4.	USA	6.12%	\$51 million
5.	Jordan	5.28%	\$43 million

Top Exporters

The diversity of Egypt's export destinations indicates healthy demand across both Arab and global markets. The presence of the U.S. and Italy suggests that Egyptian sport products—particularly sportswear, boats, and equipment—are meeting international quality standards.

Meanwhile, exports to Saudi Arabia, Sudan, and Azerbaijan reflect strong regional trade ties and accessibility. This spread across neighboring and global markets provides a solid foundation for Egypt to expand its export reach and strengthen its position in the sport product sector.

#	Country	Market shares	Total Revenue
1.	USA	44.16%	\$223 million
2.	saudi Arabia	32.64%	\$165 million
3.	Sudan	8.92%	\$45 million
4.	Azeribijan	7.76%	\$39 million
5.	Italy	6.51%	\$33 million

Product Category Analysis

Egypt's trade in sport products is concentrated in a few key categories, with imports and exports showing different focal points.

On the import side, the highest value is seen in toys, followed by sports equipment, boats and watercraft, and fitness gear. These items are primarily sourced from global manufacturing hubs, particularly China and Turkey. The chart shows that toys alone account for nearly half of total imports, reflecting strong local demand but also a dependency on external supply.

For exports, Egypt's dominance is overwhelmingly centered around carpets and floor coverings, which represent the vast majority of total export value. This suggests Egypt has a competitive edge in textile-based sport and leisure products. Other categories with moderate export activity include sportswear, boats, and miscellaneous items.

Summary

Egypt's import activity is product-diverse but dominated by mass-market items, while exports are highly specialized, with carpets leading the way. Strategic investment in expanding exports of sportswear and equipment, and reducing import reliance on toys, could help balance trade and enhance Egypt's competitive position.

Trade Forecast & Outlook (2025 and Beyond)

57.4%

Trade growth rate

\$138 M

Trade surplus

Egypt's sport product trade is projected to continue its positive trajectory in 2025, with exports expected to rise and imports declining further. According to the forecast, Egypt will reach a trade surplus of approximately **\$138 million**, with a projected trade growth rate of **57.4%** over the year.

Export revenues are estimated to hit \$217 million, driven largely by high-performing categories such as arms and ammunition, carpets and floor coverings, and boats and watercraft. Arms and ammunition alone are forecasted to contribute \$93.14 million, marking an 88.55% increase, while carpets are expected to bring in an additional \$119 million.

In contrast, import values are projected to decline, continuing the trend observed from 2022 to 2024. This reflects potential growth in local manufacturing and import substitution, especially in high-volume categories like toys and sports equipment.

“The overall outlook is promising, suggesting Egypt is on a sustainable path toward reducing trade deficits and strengthening its position as an exporter of competitive sport products. With continued investment in production capacity and export promotion, Egypt is well-positioned to expand its influence in regional and global markets.”

In 2024, Egypt's sport product trade marked a shift toward export-led growth. After years of deficits, the country achieved a trade surplus in 2023, driven by rising exports and a steady drop in imports. This reflects stronger domestic production and growing international demand for Egyptian goods.

Key insights

- 1. Shift toward export-led growth:** Egypt transitioned from trade deficits to a surplus in 2023, as exports rose and imports declined. This trend reflects improved production capacity and rising global demand for Egyptian sport goods.
- 2. Carpets remain the export cornerstone:** Carpets and floor coverings consistently led Egypt's sport-related exports, highlighting the country's competitive edge in textile-based products.
- 3. Diversification of export portfolio:** Recent growth in arms, boats, and sportswear shows that Egypt is beginning to broaden its export base beyond traditional sectors, setting the stage for future expansion.
- 4. Continued import dependence on key suppliers:** Despite export progress, Egypt remains heavily reliant on imports from China, especially for toys and fitness equipment. These categories represent opportunities for local manufacturing investment.
- 5. Strong regional and global market presence:** Top export destinations include Saudi Arabia, the United States, and Jordan. These markets reflect both cultural alignment and growing international competitiveness.
- 6. Positive 2025 trade outlook:** Exports are projected to reach \$217 million in 2025, while imports are expected to decline further—reinforcing Egypt's trade surplus and momentum in the global sport goods market.

Recommendations

This section outlines key strategic actions Egypt can take to enhance its position in the global sport product trade. The recommendations are based on observed trends, trade performance, and forecasted growth, with each action ranked by priority to guide decision-makers on where to focus resources for the greatest impact.

Next steps

#	Recommendations	Priority
1	Imports of toys and equipment dominate; reducing reliance on China can close the trade gap and create local jobs.	 HIGH
2	Carpets dominate exports; growth in sportswear and boats shows potential for diversification and higher returns.	 HIGH
3	Countries like Saudi Arabia and the U.S. are major importers of Egyptian goods—relationships should be strengthened.	 MEDIUM
4	Attract Investment into Arms & Ammunition Production	 HIGH
5	Overreliance on a few countries is a risk—exploring alternatives like Turkey or regional suppliers adds resilience.	 MEDIUM

Thank you!

Thank you for reviewing this report on Egypt's trade in sport products.
